

North Tahoe Middle School – Forest Health Mapping Project

X marks your 10 x 10 meter site location
30 meter

Date: _____

Team Members:

The purpose for this project is to create baseline data to identify the health of the existing forest at Burton State Park. Your job will be to work as a team to count and identify tree species in a 10 x 10 meter area and record the data in your journal. You will then plot trees greater than 60 cm in circumference on the grid map provided and fill in the data sheet. Students will then recommend a fuel reduction treatment plan based on specific criteria.
